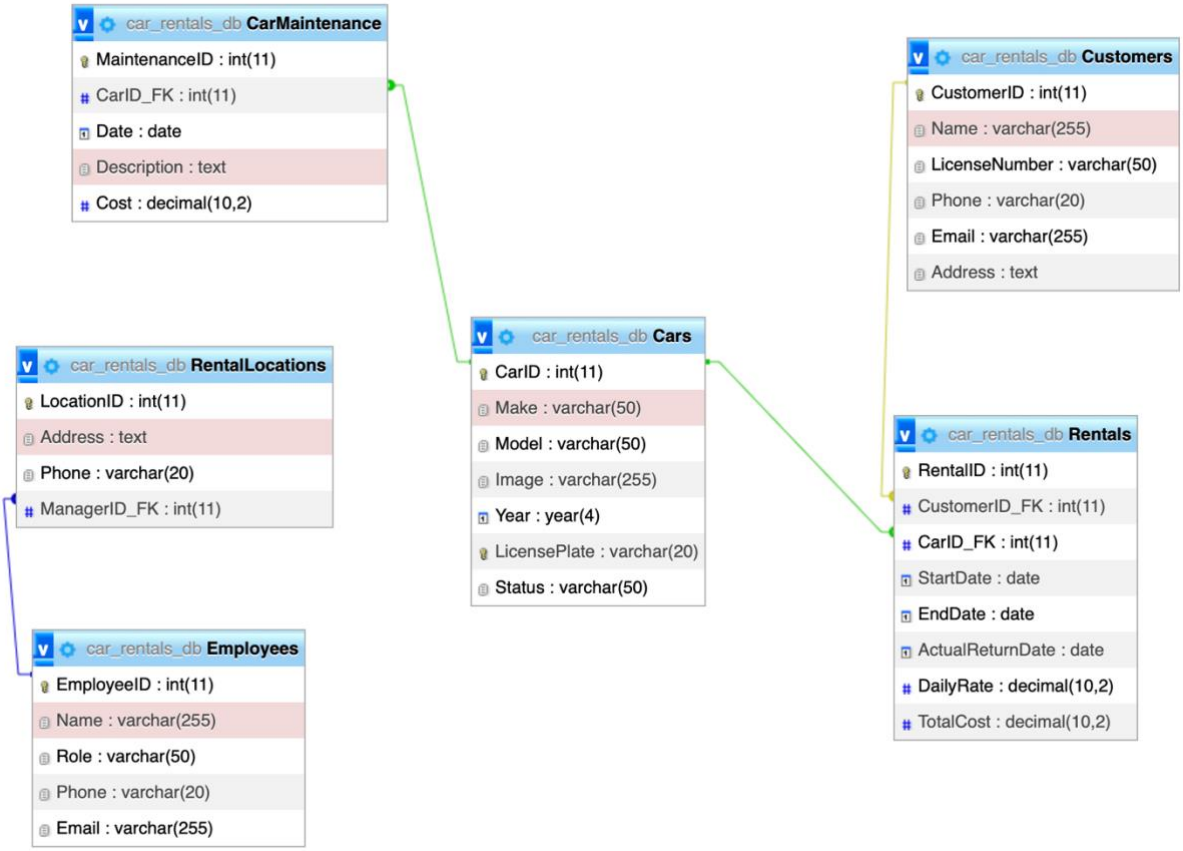
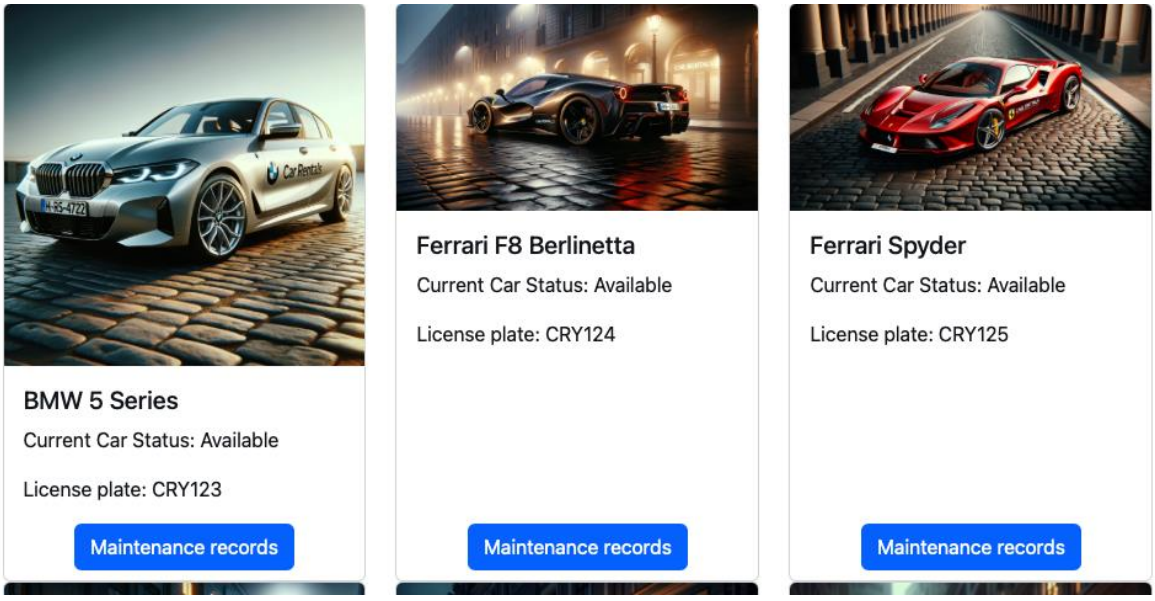
Car rental database Scenario

Car_rentals_db in PHPMYADMIN data designer



1. Read the car rental scenario to understand this case study.
2. Copy the images and logos directories accordingly in your cars_rentals directory.
3. Use the files from VLE. Import the car rentals sql file in a new database called car_rentals_db.
4. Inspect the tables, your designer should look similar to the above screen shot.
5. Create the ShowCars.php to display all cars which shall use data from the Cars table. We shall use Bootstrap the GUI for faster CSS design. The page should look like the following:



BMW 5 Series
Current Car Status: Available
License plate: CRY123
Maintenance records
Ferrari F8 Berlinetta
Current Car Status: Available
License plate: CRY124
Maintenance records
Ferrari Spyder
Current Car Status: Available
License plate: CRY125
Maintenance records
