Car rental database Scenario

Car_rentals_db in PHPMYADMIN data designer

1. This exercise requires Car Rentals exercise 1 and 2 to be completed fiirst.
2. Create a new php file called Menu.php.
3. Use bootstrap navigation to add menu items with the following links, note that these pages may exist but can contain dummy info for the time being – just to test links are working:
    a. Add a car
    b. Remove a car

4. Link the files correctly so that both Show Cars and Maintenace will have the respective menu. Do the following:

a. Add a brand image to the menu, use CSS to adjust accordingly.

b. Clicking on the logo should take you back to vehicles page.

5. Make sure that the log information is correctly displayed once the Maintenance records button is clicked. The maintenance data exists in the CarMaintenance table.
